RAF NAR

Flóki Vilgerðarson was the first Viking to deliberately sail to Iceland. Flóki took three ravens with him on his journey in the hope that they might help him find land. This earned him the nickname Raven-Flóki (Hrafna-Flóki).

While the first two ravens were unsuccessful, the third took to the skies and headed northwest. When it did not return, Flóki decided to follow it in the hope that it had found land. The third raven led Flóki to Iceland, where he settled in the Westfjords. There, Flóki found a large fjord full of drift ice and decided therefore to name the land Iceland.

Rafnar's logo depicts the flight of the third raven.

The Benefits of the Rafnar Hull

A product of the harshest conditions of the North Atlantic, the Rafnar Hull has been confirmed by professionals worldwide to provide mariners with **endurance and comfort** in crafts that are practically **impossible to make unsafe**.

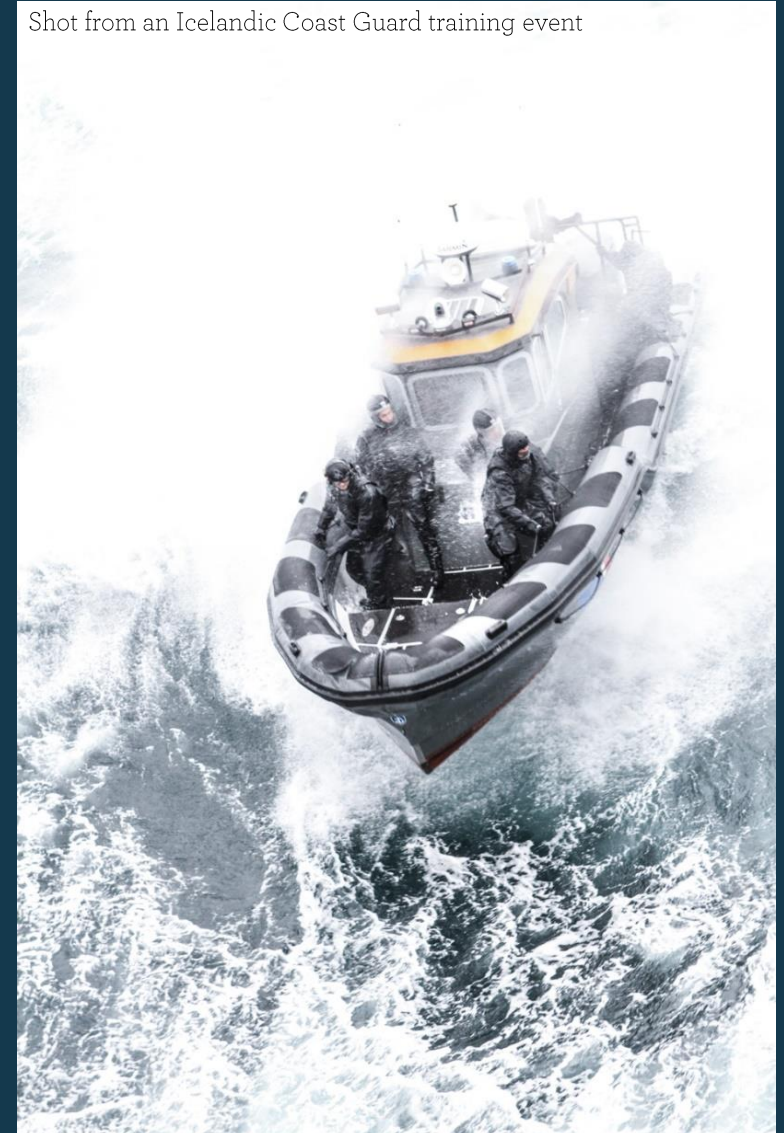

The Rafnar Hull provides a **uniquely smooth experience, precision performance** and a **high payload capacity** without compromising comfort, or cruising and top speeds.

The Rafnar Hull keeps the vessel fixed in the water, delivering **immediate handling** response and **unrivaed speed and grip** in turns with no sliding.

Independently verified by the University of Iceland* to **reduce slamming by up to 20x**, the revolutionary Rafnar Hull is capable of ensuring **otherwise unattainable seakeeping** in the most extreme marine environments.

Experiencing almost **no wave slamming**, the Rafnar Hull is the means to an **enduring lifestyle of comfort and exploration**.

The Rafnar ÖK Hull CFD*

Dynamic Heave and Trim

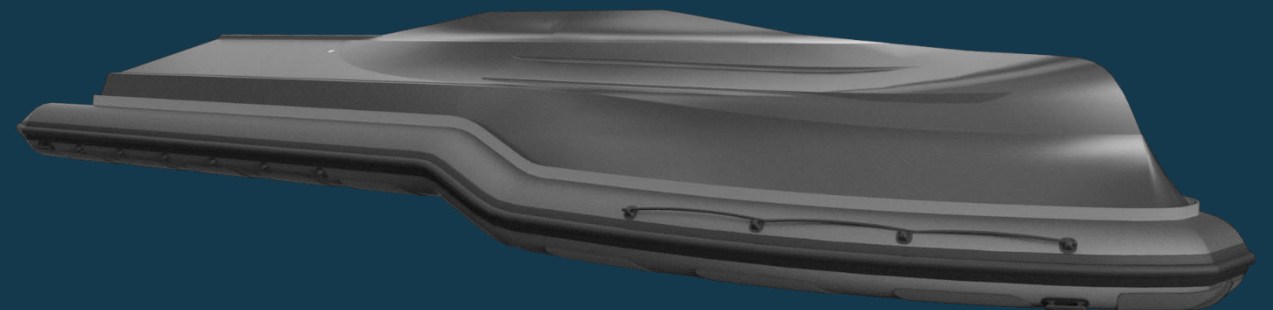

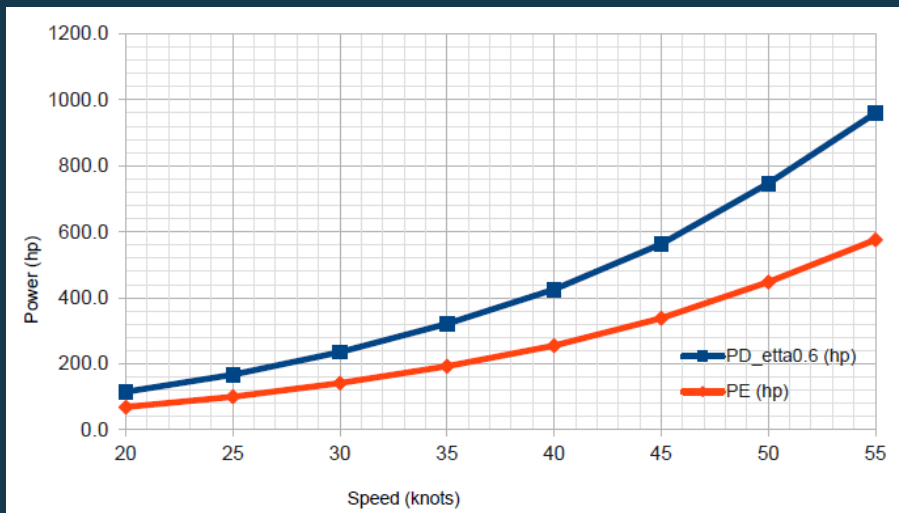

The **ÖK Hull** exhibits exceptionally **stable behavior** with respect to **dynamic heave and trim**, and **highest speeds**.

The **special characteristics** evident from the trim and heave curves are what makes the **Rafnar Hull unique** and allow it to **perform** in the **unrivalled** way that it does.

The **ÖK Hull** design has been **proven**, through testing and trials, to demonstrate **better seakeeping capabilities** than those of conventional, comparable, hulls.

Effective Power and Delivered Power**
